

Janus C4 Galaxy Datasheet

Part number: JC4-INT-GXY

About the Galaxy Integration

Janus C4 is a powerful yet easy-to-use access control system that allows users to manage and monitor physical access to sites. It integrates access control, alarm and incident monitoring and comprehensive reporting facilities.

Janus C4 supports interfaces to third-party security systems such as alarms and CCTV systems. The Galaxy Interface is an optional, separately licensable module that provides an interface between Janus C4 and one or more Galaxy systems. It enables Janus C4 users to manage the Galaxy intruder systems.

Galaxy Supported Panels

The Galaxy interface with Janus C4 supports the following intruder panels:

Supported Intruder Panels:

- Galaxy Dimension 48 Panel
- Galaxy Dimension 96 Panel
- Galaxy Dimension 254 Panel
- Galaxy Dimension 520 Panel
- Galaxy Flex 20 Panel
- Galaxy Flex 50 Panel
- Galaxy Flex 100 Panel

Please ensure that the Janus C4 Galaxy interface is licensed before proceeding

Functionality

The Galaxy Interface module includes the following functionality:

- It allows PIR to be controlled (inhibited and uninhibited)
- It allows AREAS to be controlled (set and unset)
- It creates customizable alarms when movement is detected
- It allows areas to be added to the mapping interface. This includes animated icons.
- It allows areas states and events to be used by the automatic actions system
- It synchronises all user codes across Janus C4 and the Galaxy panel, providing one place to manage codes

Overview of the Interface

Integration is managed by a separate, licensable Janus C4 module which manages communication with each of the Galaxy panels.
