

Janus C4 Texecom Integration Datasheet

Part number: JC4-INT-TXC

Overview

Texecom is a well known solution and product provider of Intruder Alarms. The company's product portfolio includes a full range of Intruder panels and detectors, along with digital and cloud-based solutions with wider security and building management systems.

The Texecom integration into Janus C4 allows users within Janus C4 to set, unset and reset the intruder alarm (and areas within), be alerted to triggered zones, create 'Automatic Actions' and have the intruder devices represented on a map for ease of use.

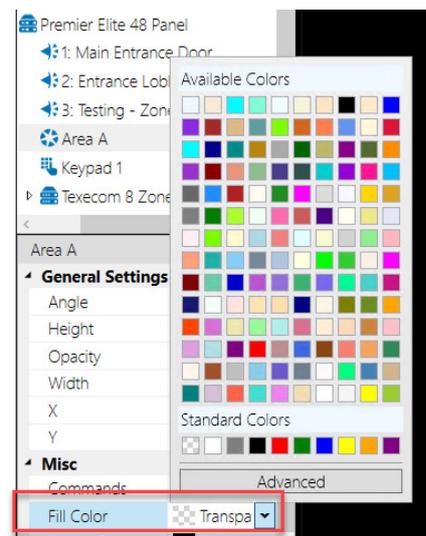

The Texecom Integration is managed by a separate, licensable Janus C4 module.

Key Features

- Allows detectors to be controlled (inhibited and uninhibited)
- Allows AREAS to be controlled (arm, disarm and reset)
- Alarms are generated on armed areas, any 24/7 zones and panic alarms
- Allows areas to be added to the mapping interface, including animated icons
- Allows areas states and events to be used by the automatic actions system
- It can, if required, synchronise all user codes across Janus C4 and the Texecom panel, providing one place to manage codes

Licensing

The Texecom Integration licence is **PER** Intruder Panel e.g. if you have 1 x Texecom Panel and 3 x Expanders with 28 Zones, you will need 1 x Texecom licence.

Integration Difficulty Level

Easy	Some Complexity	Expert
	✓	

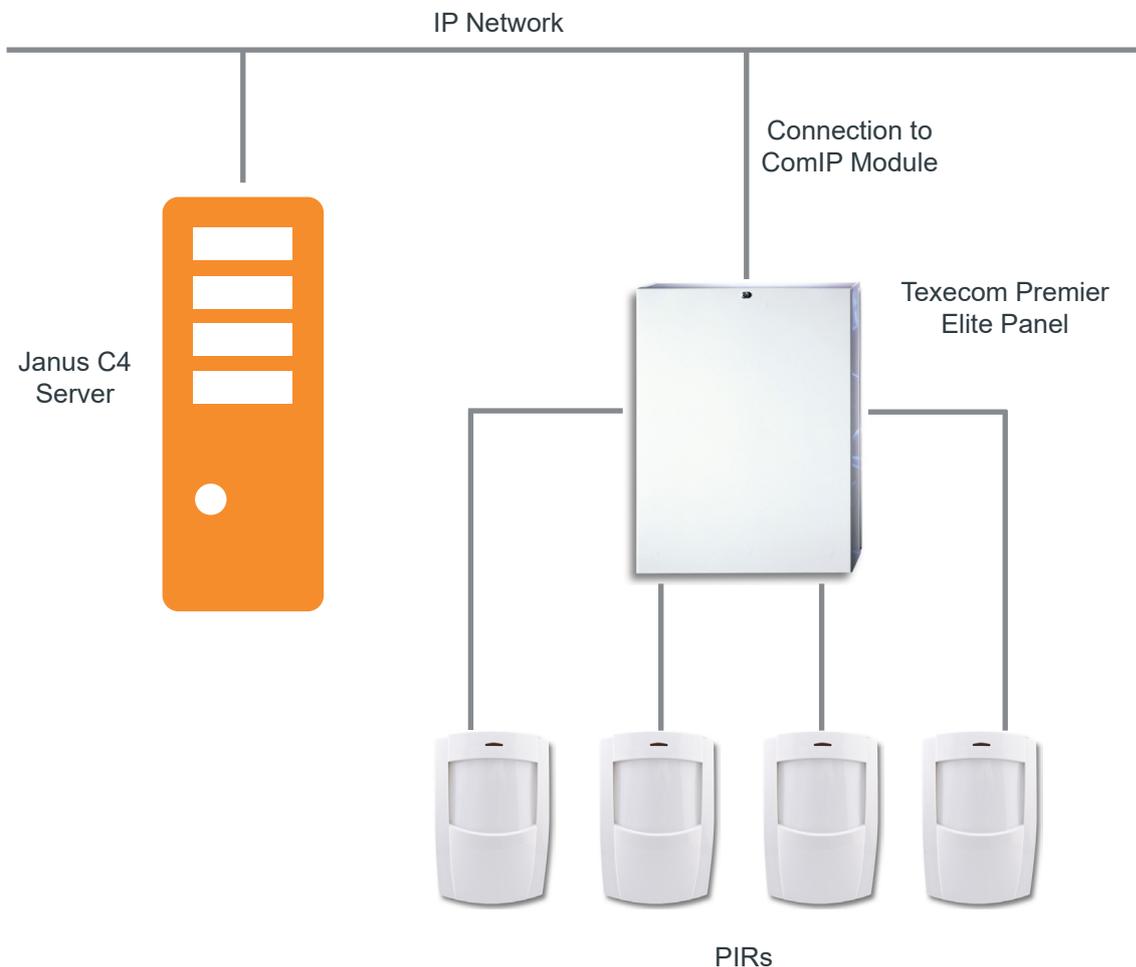

Supported Versions

The Texecom interface with Janus C4 supports the following intruder panels:

- Texecom-ELITE-168
- Texecom-ELITE-88
- Texecom-ELITE-48
- Premier Elite firmware v4 and above is supported

Prerequisites

- The Janus C4 Texecom Integration is licensed
- You have a ComIP installed on the Texecom Panel, with:
 - The correct port of 10001 issued to the ComIP Port (nothing else can be 10001)
 - A unique IP address in the same range as the Janus C4 Server
- You have both the 'Engineers' passcode and the UDL passcode of the Texecom Panel

Additional Information
