

High Capacity Battery Operation Module Installation Guide

EM-BB-HC-IT/RS

General

The EM-BB-HC-IT/RS is a power supply back-up battery module capable of running the terminal under power supply fail conditions.

Advanced diagnostics allow charge state, voltage current and temperature to be remotely monitored.

Based on a lithium-polymer battery the module will typically run the IT31/GT4 for up to 2 hours or the IT51 for up to 1 to 2 hours (depending on hardware configuration) and is compatible with all power options including PoE.
